Response to Amendment

In page 1, the parent data after that inserted by amendment should be deleted.

Claims 1 and 3-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over the combination of Yoshida et al. and the following comments.

The rejection is maintained as stated in the office action mailed 8/30/00.

Applicant argues that there is no chance that crystal defects are caused in the substrate surface and no autodoping of the epitaxial layer is caused. However, the claims are not so limited. Applicant is labeling a portion of the implanted region that does not reach the surface of the substrate while acknowledging that ions reside above the portion at the first full paragraph on page 4 of the amendment filed 12/4/00.

Applicant argues that the implanted region is produced at the surface. However, applicant is directed to region 6' as shown in figures 5 and 6.

Applicant argues that there is no suggestion to shift the internal temperature prior to an epitaxial growth step. However, use of a single reactor and choice of process temperatures is suggested as stated in the office action mailed 8/30/00.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

Art Unit: 2823

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
